**ABSTRACT :** *In this 20<sup>th</sup> century, technology development becomes very fast, includes internet. This condition gave easiest and fastest way to access any kind of information, including pornography. This research aimed to explore the correlation of attitude of adolescents to pornography in internet and their sexual behavior. Using 50 senior high school students which came to internet rental at the age of 15-19 years old, had chosen by incidental sampling, the results showed that there is a positive and significant correlation between attitudes of pornography in internet with sexual behavior of adolescents ( $r=0.371$ , and  $p=0.009$ ). Sexual behavior was measured from behavior of awakening and exploration, autosexuality and heterosexuality that is including kissing, necking, petting, heavy petting, and copulation. From pornography in internet, adolescents only learn that sex is somehow more romantic or less wrong if it "just happens" and full of passion. By portraying spontaneous, unplanned genital intercourse as the ultimate pleasure, these programs model a behavior that puts teens at increased risk for sexually transmitted diseases or unplanned pregnancies. Community counseling approach gave complete and integrated intervention model to help adolescents. For community direct intervention, non traditional sex education for adolescents was designed as community-wide educational programs. And for community indirect intervention, suggested government to make regulation for internet rental business. Individual, group and peer counseling for the direct clients intervention. And parents', teachers' developing program for indirect clients' intervention.*

*Key words : Pornography in internet, adolescents' premarital sexual behavior, community counseling*

### **INTRODUCTION**

*Pornography comes from the word porn and graph in. Porn means prostitutions, and graph in means writing or drawing. So pornography means writing or drawing which gave sexual arousal for people who see or read it. In days like now, improvement in technology made pornography was distributed fast by using internet. Like any other information, pornography could be access very easy and fast by internet. Besides games, pornography becomes the second facilities that user of internet were looking for (Cooper in Eriandani, Rizky). Any kind of pornography, we could find in internet such as information, pictures, films, jokes, on line prostitutions, etc.*
