ISOLATION AND PARTIALLY PURIFICATION OF PROTEIN DISULFIDA ISOMERASE FROM *Saccharomyces cerevisiae* [pUKC470]

Mariana Wahyudi[1], Muliawati Sindumarta[2], Dessy Natalia[2]
[1] *Fakultas Farmasi Universitas Surabaya,* [2] *Departemen Biokimia MIPA Kimia Institut Teknologi Bandung*

ABSTRACT

Protein disulphide isomerase (PDI) is a multi-enzyme involved in catalyzing redox and isomerization reactions of disulphide bonds in secretory proteins. This investigation is focused on the isolation and partially purification of PDI from *Saccharomyces cerevisiae* [pUKC470] in order to elucidate mechanism of action of PDI by characterizing kinetics of the enzyme. The specific activity of PDI isolated from transformant increased by 17 fold compared to the wild type *Saccharomyces cerevisiae* W303. The purification of PDI from transformant using ammonium sulphate fractionation followed by ion exchange chromatography on DEAE-Sephacel revealed that the specific activity of PDI increased to 255.28 unit per mg, a degree of purity 137 fold compared to the cells free extract, and yield of 41 %.

Keywords: DEAE-: dietilaminoetil-; PDI: Protein disulphide isomerase; Saccharomyces cerevisiae [pUKC470]

CURCUMIN INHIBIT REDUCTION OF THE ADIPOCYTE LEPTIN-RECEPTOR INDUCED BY ATHEROGENIC DIET

M. Rasjad Indra, Wibi Ariawan, Tinny E. Hernowati.
Laboratory of Physiology Medical Faculty Brawijaya University.

ABSTRACT

Curcumin is one of the phytopharmaca that can inhibit lipid peroxidation by reserving antioxidant (super oxide dismutase, katalase, and glutathione peroxidase) activity. Vascular injury caused by atherogenic diet, through oxidative stress mechanism, tends to reduce the leptin receptor in peripheral tissues. The aim of this research was to investigate the ability of curcumin to inhibit leptin receptor reduction by evaluating the adipocyte leptin receptor density in the adventitia aorta of rat treated with atherogenic diet with and without curcumin administration.

Combine nutrition between atherogenic diet and curcumin (atherogenic diet without curcumin; atherogenic diet + 50 mg / kg BW / day curcumin; ath-
