TABLE OF CONTENTS

SYMPOSIUM A

A1.1_Masafumi Yohda_Catalytic Mechanism of Nitrile Hydratase Proposed by Time-Resolved X-Ray Crystallography.....	1
A1.2_Siswa Setyahadi_Bioconversion of Extraction Chitin from Penaeus Vannamei Shell Waste.....	3
A1.3_Indu Shekhar Thakur_Bioremediation and bioconversion of chromium and pentachlorophenol in tannery effluent by microorganisms.....	10
A1.4_Mukh Syaifudin_Pre-Erythrocytic Stage of Plasmodium as the Best Choice of Vaccine Development for Malaria with Nuclear Technology.....	11
A1.5_Misri Gozan_Cellulase Immobilization Using Reversible Soluble-Insoluble Polymer.....	20
A1.7_Muhammad Sahlan_Organic Co-Solvent Stability of the Chaperones from Hyperthermophilic Archaea Thermococcus sp.....	21
A2.1_Mahmud Sudibandriyo_Effect of Adsorbed Phase Density on High Pressure Adsorption Isotherms..	22
A2.3_Sutrasno Kartohardjono_Ammonia Removal from Aqueous Solution through Hollow Fiber Membrane Contactor Using Natural Hot Spring Water (NHSW) as Absorbent.....	29
A2.5_Yuliusman_Producing Activated Carbon from Corn Cob for Cu, Pb, and Ammonia Adsorption.....	30
A2.6_Herliati_Simulation of Epichlorohydrin Synthesis from Dichloropropanols in Reactive Distillation Column Using Aspen Plus.....	39
A2.7_Setiadi_A Study On The Crystallization Stage Of The ZSM-5 Crystal Structure For Improving The Zeolite Synthesis Route.....	43
A2.8_Yuswan Muharam_Model to Predict Species Concentrations from the Oxidation and Combustion of the Mixture of N-Heptane and Iso-Octane.....	50
A3.1_Yurita Puji_Optimization of Pipeline Network for Gas Distribution using Genetic Algorithm.....	59
A3.2_Rita Arbianti_Production of Electricity Energy in Microbial Fuel Cell System Using Saccharomyces Cerevisiae.....	65
A3.3_Dianursanti_The Effects of Cells Density Arrangement in Chlorella vulgaris Culture to CO2 Fixation and Essential Substances Production	72
A3.4_Heri Hermansyah_Esterification of Oleic Acid with Octanol to Produce Wax Ester using Candida rugosa lipase.....	77
A3.5_Listio Sambono_Application Analysis of Underground Storage As an Alternative For Natural Gas Storage Facilities in West Java Pipeline Distribution Network.....	83
A4.1_Suripto Dwi Yuwono_Lactic Acid Production From Fresh Cassava Roots by Streptococcus bovis using Single stage membrane bioreactor.	86
A4.2_Muhammad Zakir_Amino Acid Composition of Rice Bran Concentrate from Several Local Rice Varieties as a Potential Source of Bio-emulsifier Material.	92
A4.3>Edita Martini_Bead Formation Mechanism In Cellulase Entrapment Using Calcium Alginate.....	98
A4.5_Edi Iswanto Wiloso_Environmental Impacts of Bioethanol from Oil Palm Lignocellulosic Biomass - An LCA Perspective.....	104
A5.1_Nelson Saksono_Hydrogen Production Using Non-Thermal Plasma Electrolysis.....	112
A5.2_Eva F. Karamah_Degradation of Phenol By Combination of Ozonation and Cavitation.....	119
A5.4_Eny Kusrini_Micro and Nanoparticle of Lanthanide Complexes for Photosensor Application.....	127
A6.1_Praswasti PDK Wulan_Production Of CO2-Free Hydrogen and Nanocarbon Using Carbon Foam-Supported Nickel Catalyst.....	128
A6.2_Yuswan Muharam_Simulation of Ignition Delay Times in the Oxidation and Combustion of the Mixture of n-Heptane and Isooctane.....	133
A6.3_Muhammad Sahlan_Rapid Purification of Phospholipase A2 from Acanthaster Planci.....	138
A6.4_Nuryetti_Characteristical Bionanocomposites Cassava StarchZnO With added glycerol.....	139

A6.5_Yustinus P_Computational Chemistry for Surface Bio-Functionalization of Diamond Study Structure Calcium Phosphate Doped CVD-Diamond 111.....	145
Plenary 6_Toshikuni Yonemoto_Continuous Production of High Quality Biodiesel from Vegetable Oils with High Fatty Acid Content Using.....	149

SYMPOSIUM B

B1.1_L.P. Lighart_VIEWS on Future Developments of Indonesian Radar Systems.....	152
B1.2_Ratno Nuryadi_Computer Simulation of Quantum Confinement Effect in Silicon Nano Wire.....	160
B1.4_Daryanto_Compact Slotted Ring Triangular Microstrip Antenna for Bandwidth Enhancement.....	168
B1.5_Syarfa Zahirah S_Wideband Biconical Antenna for Accurate EMC measurements.....	172
B10.1_Kalamullah Ramli_Development and Enrichment of Ultrasonography's Visualization and Analysis Functions.....	178
.	
B10.2_Bambang Murdaka Eka Jati_The Model of Blood Pressure Monitoring System.....	185
B10.3_Ernestasia Siahaan_E-Health System Service Identification for Vaccine Distribution in Indonesia	191
B10.4_W. G. Ariastina_Phase-Resolved and Voltage Difference Analysis of Partial Discharges in Oil-Impregnated Insulation.....	196
B10.5_Maniah_Assessment Phase of The Information Technology System.....	204
B10.6_Nachwan M. Adriansyah_Modeling for Joint Routing & Scheduling In WiMAX Wireless Mesh Network.....	210
B11.1_Dodi Sudiana_Comparison of DIInSAR Analysis and DEM Watershed Segmentation.....	217
B11.2_Dodi Sudiana_Derivation of Land Surface Temperature using MODIS Data for Global Warming Monitoring.....	225
B11.3_I Made Wartana_Optimal Placement of UPFC for Maximizing System Loadability by Particle Swarm Optimization.....	233
B11.4_Erwani Merry S_Design and Simulation Autotuning PID Controller Using Relay Feedback Method on PLC Modicon M340.....	241
B11.5_M Ramdlan Kirom_Very Narrow Bragg Grating Filter for Wavelength Division Multiplexing....	249
B11.7_Mia Rizkinia_Performance Evaluation of 802.11b Using Wajebolic Antenna.....	254
B12.1_Wahidin Wahab_Programming the Smart Humanoid Robot Nao.....	261
B12.3_Inge Martina_A Modified Cut and Splice Crossover in Genetic Algorithm for Network Routing Optimization.....	268
B12.4_Wahyudi_Comparison between Kalman Filter and Exponential Filter on IMU Data Acquisition...	276
B12.5_Lingga Sumarno_Generating a Combination of Backpropagation Neural Networks by Means of Random Seeds Evaluation.....	282
B13.1_Oey Endra_Image Reconstruction From Compressive Sensing With Optimized Measurement Matrix.....	288
B13.2_Ari Sriyanto_Comparison of FG-BG Detection Methods for Extracting Road Traffic Parameters..	294
B13.3_Azis Wisnu Widhi N_Handwritten Basic Javanese (Nglegeno) Characters Recognition System Using Multiclass Support Vector Machines (SVM).	302
B13.4_Nazori Agani_Texture Analysis For Extraction Similarity Objects In Small Dimension Images...	308
B13.5_Oey Endra_Comparison of Optimized Random Gaussian and Partial Random Fourier Measurement in Compressive Sensing.	315
B13.6_Elisabeth Denis S_New Method to Improve Income for Natural Colored Indonesian Batik Using High Security E-Procurement Site.	321
B14.1_Retno Supriyanti_Low-Cost and Easy-to-Use Equipment for Cataract Screening based on Digital Images.	330
B14.2_Muhammad Yusro_GPS-based Navigation Devices for Visually Impaired People Comparative Survey and Future Challenges.	338

B14.3_Viny Christanti_Question Answering System for Indonesian Legal Documents.....	391
B14.5_Indrarini Diah_Sub Channelization Technique Comparison On Mobile Wimax.	353
B14.6_johan oscar_LAN Topology Design Using Prim's Algorithm.....	360
B14.7_Adwijaya_An Optimization of The Scheduling Problem on a Complete Network Using f- Coloring...	
B15.2_Muhammad Asvial_Simulation and Analysis of Delay in RFID System using Slotted ALOHA.....	366
B15.3_Tigor Nauli_The Use of RFID in DNA Barcoding.....	274
B15.4_Sri Purwiyanti_The Modelling of Glucose Detector Using Single Electron Transistor.....	382
B15.5_Kris Sujatmoko_Spectrum Sensing Cognitive Radio System Using Compressive Sampling.....	388
B15.6_Daniel Setiadikarunia_Web Embedded Microcontroller Based Traffic Conditions Informing System Using Web Browser via GPRS Network.	392
B16.1_Poki Chen_From Digital to Analogue - Using FPGA for Temperature Sensing with One-point Calibration Support.....	399
B16.4_Engelin S Julian_The Effects of Base Design to the Performances of Different Generations of SiGe HBT.	405
B16.5_Lely Hiryanto_Implementing BACON-MVV Outlier Detection Scheme in Intrusion Detection System	410
B17.1_Bohr-Ran Huang_The Fabrication of the Smart Windows Based on Tungsten Oxide Nanowires..	417
B17.2_Wiendartun_Effects of Firing Atmosphere on Electrical Characteristics of CuFe ₂ O ₄ Thick Film Ceramics Fired at 1000oC for NTC Thermistor.	422
B2.3_Bambang Setia N_Simple Frequency Reconfigurable Antenna by Changing the Number and Position of the Switches.	426
B2.4_R. Edy Purwanto_Design of Electrical Impedance Device for Early Detection of Breast Physiological Conditions.	434
B2.5_Sang Boem Lim_Application of Ubiquitous Sensor Network.....	439
B2.6_Fitri Yuli_Design of Microstrip Hairpin Bandpass Filter for 433 MHz RFID Application.....	445
B3.10_Budi Nurani_abstract_An Application of Space Time Models to Determine an Extreem Climate Indication in Indonesia.....	457
B3.11_Mia Rizkinia_Performance Analysis on Vertical Handover between WiFi and WiMAX Infrastructure Based on Mobile Node Controlled by Media Independent Handover (IEEE 802.21).....	459
B3.12_Dina Nurul Fitria_Determinant Factors on the usage of two wheeled vehicle fuel consumption and the level Of Accidents In Indonesia.	467
B3.13_Dina Nurul Fitria_Determinant Factors on the Use of Telephone Pulse Production in Indonesia.....	
B3.1_Muis Rajab_Performance Analysis of WPA2-RADIUS for Wireless LAN Security.....	452
B3.2_Tony_Color Image Watermarking Using Block Singular Value Decomposition.....	475
B3.4_Fenty Eka_Analysis and Design Adolescent Reproductive Health Counseling Application Based on Interactive Multimedia.	488
B3.5_Arief Samuel Gunawan_Implementation of Web Mining in Determining Potential Customers.....	492
B3.6_Transmissia Semiawan_Science to Engineering the nature and challenges for understanding the transformation through technology.....	499
B3.9_Atje Setiawan_Implementation of Spatial Data Mining in Mapping Quality Education in Indonesia	507
B4.1_Amien Rahardjo_The Design of Automatic Electrical Load Control System Using PLC Based Scada System.....	509
B4.2_Hermagasantos Zein_A New Method for Determining Power Decomposition.....	513
B4.3_Rasional Sitepu_Study of Light Conversion from TL Lamp and CFL Lamp into Electricity Through Solar Energy Harvesting Method as an Electricity Resource.	521
B4.4_Alireza Maheri_An Investigation into the Potential Use of Microtabs in Enhancing Energy Capture Capability of Wind Turbines.....	528

B4.6_A_Sofwan_Energy Optimization System Of Solar Cell By An Using Dinamic Measurement.....	534
B5.2_Risnidar C_Investigation of Harmonic Characteristics due to Different Types of Voltage Source....	541
B5.3_Rangga Winantyo_TiO ₂ Particles Porosity Effect on Dye-Sensitized Solar Cell by using Simulation Approach.	548
B5.4_Aji Nur Widyanto_Temperature Effect on Current Transformer Performance.....	555
B5.5_Chairul Hudaya_Development of Early Warning System (EWS) in the Power Distribution System.	561
B5.6_Budi Sudiarto_Study of Single-tuned Filter Design as a Solution for Harmonic Problem of 2200 VA Household Loads.	565
B6.1_Kuo Lung Lian_The Lagrange Optimal Power Flow (LOPF) with Generator Capability Curves as Constraints.	572
B6.2_Budiono Mismail_Rural Electrification in Indonesia with Emphasis on Microhydro Electric Scheme.....	579
B6.3_A_Sofwan_Picohydro System Simulation Based on Water Gravitation with 4 Noozles Housing Impeller as Prime Movers.	587
B6.4_Dani Harmanto_Integrated Framework of Automotive Body Surface Using FEA Technique.....	
B6.5_Takahiro Nakano_Development of general-purpose energy system analysis simulator ENERGY FLOW +M ~Static analysis of solar collector~.....	594
B7.10_Luh Krisnawati_Comparison Study of AC and DC Microgrids.	609
B7.11_Wike Handini_Homer and Vipor Software Simulation Results of a Hybrid Power Plant, Case Study at Bengkunat, West Lampung.	615

ABSTRACT

Mobile phone consists of some input elements as its user interfaces for example keypad and navigator. Shape, layout, and dimension of the input elements determine the user interface configuration of mobile phone. The configuration of user interface may influence user comfort in using mobile phone. For that reason, it is important to understand the effect of various mobile phone's user interface configurations to user comfort. This research investigates the effect of mobile phone's user interface configurations on user comfort. First, this research collects some data related to shape, layout, and dimension of keypad and navigator of available mobile phones. Then, the data are synthesized to develop various alternatives of user interface configurations. Finally, a survey is conducted to investigate the effect of the developed configurations on user comfort. A questionnaire is spread among the user of QWERTY mobile phone as a survey. The result of the survey shows that some configurations are not preferred by the users because it is not comfortable according to them. However, the configurations that accommodate tight distance and square keypad with trackpad navigator provide the highest level of user comfort.

1. INTRODUCTION

Some types of mobile phone, which have been launched, could not attract user to buy them. The important reason of the fact is because user does not feel comfortable in using those mobile phones. Hence, user comfort should be considered in developing a mobile phone. User comfort in this case is a pleasant feeling of being relaxed and free from pain in using a mobile phone. To increase user comfort level in using a mobile phone, usability aspect of the mobile phone should be investigated. The usability aspect is related to user interface of the mobile phone. User interface of a mobile phone is divided to three types, which are physical user interface, logical user interface, and graphic user interface [1]. The physical user interface can be divided into seven user interface elements in example input, display, audio and voices, ergonomics, detachable parts, communication method, and applications [2].

Some researches have been done in evaluating elements of physical user interface, in specific input element. Mittal A. and Sengupta A., propose keypad layout of non-QWERTY mobile phone to increase the speed in entering text [3]. They also evaluate the proposed keypad layout by asking six subject to type text using the keypad. However, this research evaluates only the typing speed of each subject and does not evaluate user comfort level.

Jin, B.S. and Ji, Y.G., propose an evaluation framework to quantitatively measure the usability risk in the mobile phone user interface. Related to the input element of user interface, they evaluate the controllability and usability of the key types of mobile phones [4]. However, this research describes only the controllability and usability of the key types of some non-QWERTY mobile phones.

Meanwhile, Park, Y. S., and Han, S. H., investigate the effect of touch key sizes and locations on a mobile phone [5]. In the research, they evaluate the first transition time, task completion time, number of errors, and the pressing convenience of the subject in using the touch key. The result related to the pressing convenience shows that the region in the middle centre of mobile phone provides higher satisfactory score for the user compare to the other regions. In this research, the evaluation is performed to the subject in using the touch key with one hand thumb.

None of the previous researches give information about the relation between physical user interface configuration of QWERTY mobile phone and user comfort. Based on the preliminary observation, the configuration of the physical user

interface may influence user comfort in using the mobile phone. For that reason, it is important to understand the effect of various QWERTY mobile phone's physical user interface configurations to user comfort.

2. RESEARCH METHODOLOGY

This research investigates the effect of QWERTY mobile phone's physical user interface configurations on user comfort. In this research, the physical user interface configuration is limited to the configuration of input elements of the physical user interface. In general, the configuration of input elements is determined by their shape, their layout, and their dimension. This research is performed in two stages. First, some alternatives of mobile phone's input element configurations are developed based on available mobile phone's models. At the second stage, a survey is conducted to investigate the effect of the developed mobile phone's input element configurations in user comfort.

At the first stage, data collection is conducted to get information related to various input elements of mobile phone. The QWERTY mobile phone's models, which are released in 2010 and before, are used in this stage. Then, the input elements of the mobile phone's model are classified. Not all input elements are investigated. Keypad and navigator are the input elements of mobile phone, which are investigated. Finally, various types of keypad and navigator are analyzed and synthesized to develop various alternatives of mobile phone's user interface input element configuration.

At the second stage, a questionnaire is spread to 30 users of QWERTY mobile phone as respondent. The age of the respondents is between 18 years old to 25 years old. Before that, some mobile phone prototypes, which describe all alternatives of mobile phone's input element configurations, are made. Then, the respondents are asked to pretend using each prototype to make a phone call. In using the prototype, the respondents are asked to use both of their hand thumbs. Next, the respondents are asked to assign a score between 1 and 5 in scale of likert for each of configurations. The assigned scores represent the comfort level related to each alternative of configurations. In this research, a score of 5 points means the alternative of configuration provides the highest level of comfort. Meanwhile, a score of 1 point means the alternative of configuration provides the lowest level of comfort.

3. RESULT AND DISCUSSION

Based on the available mobile phone's models, the keypads of mobile phone are classified according to their shape, their layout, the distance between them, and their numeric area location. The shapes of keypad are divided into two categories, which are round and square. The two types of layout are straight and curve. And, the distances between keypad are loose and tight. Meanwhile, the mobile phone navigation elements are classified according to their types of navigation and the shapes of the navigation element. Three types of navigator are dome key, trackball, and trackpad. Each of types is divided into three shapes, which are round, square and oval.

However, based on a preliminary survey, keypad layout and numeric area location do not give a significant influence into user comfort. For that reason, the alternatives of mobile phone's input element configurations are developed based on keypad shape, keypad distance, and navigation type and shape. Morphological chart to develop various alternatives of mobile phone's input element configuration is shown in figure 1.

	Solution 1	Solution 2	Solution 3	Solution 4	Solution 5
Keypad distance	Tight	Loose			
Keypad shape	Round	Square			
Navigation	Round Dome Key	Square Dome Key	Trackball	Trackpad	Oval Dome Key

Figure 1: Morphological Chart

Based on the morphological chart, 20 alternatives of mobile phone's input element configuration are developed. The alternatives of mobile phone's input element configuration are shown in figure 2. Then, 20 prototypes of mobile phone, which represent each configuration alternative, are made from Styrofoam. Some examples of the prototypes are shown in figure 3.

Figure 2: Various Alternatives of Mobile Phone's Input Element Configuration

After the respondents are asked to pretend using each prototype to make a phone call, the respondents are asked to assign a score between 1 and 5 in scale of likert for each of configurations. A score of 5 points means the alternative of configuration provides the highest level of comfort. Meanwhile, a score of 1 point means the alternative of configuration provides the lowest level of comfort. Table 1 shows the percentage represents the comfort level related to each alternative of configurations.

As shown in table 1, type 7 of mobile phone's configuration provides the highest level of user comfort. It means that mobile phone's configurations with tight keypad distance, square shape keypad, and square dome key provide the highest level of user comfort. Meanwhile, type 19 of mobile phone's configuration, which consists of loose keypad distance, square shape keypad, and trackball, provides the lowest level of user comfort.

Related to the keypad distance, the highest level of user comfort has been provided by mobile phone's configurations, which consist of tight keypad distance, as shown by type 1 to type 10. Mobile phone's configurations, which consist of square shape keypad, provide higher level of user comfort compare to round shape keypad. Meanwhile mobile phone configurations with trackpad provide the highest level of user comfort compare to other types of navigation.

Based on the research, the configurations that accommodate tight distance and square keypad with trackpad navigator have the highest level of user comfort. The highest level of user comfort has been provided by mobile phones, which have tight keypad distance. In addition, the square shape keypad of mobile phones provides higher level of user comfort. Moreover, mobile phones with trackpad provide the highest level of user comfort.

4. CONCLUSION

Based on the research, the configurations that accommodate tight distance and square keypad with trackpad navigator have the highest level of user comfort. The highest level of user comfort has been provided by mobile phones, which have tight keypad distance. In addition, the square shape keypad of mobile phones provides higher level of user comfort. Moreover, mobile phones with trackpad provide the highest level of user comfort.
