

Willingness of Tax Amnesty Participation Based on Financial Audit Quality

Permata Ayu Widyasari, Celina Tashya Evangelista and Yie Ke Feliana
University of Surabaya, Indonesia
permataayu@staff.ubaya.ac.id

Abstract. Tax amnesty is an Indonesian government program which company may reveal its hidden asset. By paying redemption money, taxpayer is able to reveal its hidden asset without getting typical administrative sanction of taxation. It turned out that many company hiding its asset participated in this program. That condition raises question regarding audit quality of financial statement of those companies. Audit quality is proxied by accounting firm's reputation, industry specialization, and tenure. The research shows that accounting firm's reputation had significant negative impact on participation in tax amnesty program in 2016, 2017, or both, and the amount of restatement regarding tax amnesty program. BIG - 4 accounting firms are associated with better audit quality, consequently, the company which audited by BIG-4 are less likely to participate in tax amnesty. In addition, leverage as control variable had significant negative impact on participation in tax amnesty program.

Keywords: audit quality, accounting firm's reputation, tax amnesty, restatement.

1 Research Background

The effectiveness of tax amnesty, in long run and short run, is still debatable yet it is being used as fiscal policy for a national income source of a country. In short run, it might give the additional revenue of a country but in long run it might potentially reduce the future tax compliance [1]

Development of Indonesia is rely on tax payment. More than 80% of indonesia's budeging is obtained from tax payment¹. When particular citizen not participate in paying tax by hiding its asset, it violate the fairness and justice principles of Indonesian tax system. Moreover, there are Indonesia citizen investing their hidden asset abroad. Those hidden asset presumably can be used for Indonesian development.

¹ Based on Indonesian Budgeting, 2018

The hidden asset are supposed to be imposed with income tax (the normal rate is progressive from 5% until 30%) plus its sanction 2% per month (maximum 24 month).² That condition make the taxpayer reluctant to reveal their hidden asset. It is needed a policy which give assurance about the legal certainty and safety of the tax payer when they reveal their hidden asset.

An amnesty usually permit a person or an entity to reveal its hidden asset, without imposed regular tax sanction and regulation [2]

On 2016, Indonesian government launched tax amnesty policy. By paying redemption money, taxpayer is able to reveal its hidden asset without getting typical administrative sanction of taxation. The proposed rate of redemption is lower than the normal rate of tax income plus its administrative sanction, which is only 0.5% - 10%. In addition, tax amnesty participant will be granted the omission of tax payable, administrative sanction, tax inspection and termination of ongoing tax inspection.³

As a fiscal policy, Indonesian tax amnesty has several purposes, firstly, to accelerate the economic growth through increasing domestic liquidity, strengthening the rupiah exchange rate, lowering interest rate, and increasing investment. Secondly, construct the valid, transparent, and integrated database and tax system. Thirdly, increase tax revenue for Indonesian capital expenditure.

For a delinquent tax payer, willingness to participate in tax amnesty will be driven by cost of non-compliance, including tax inspection and future double tax fines. [3]

In Indonesia, after termination of tax amnesty period, if the government find any hidden asset, it will be imposed tax fine until 200%.

Indonesian tax amnesty has been done from September 2016 – March 2017. It gave the opportunity for tax payer to expose its hidden asset based on Annual Tax Return of tax year 2015. For the listed company, if the asset is hidden in the Annual Tax Return of 2015, automatically it is hidden in 2015 financial statement. Consequently, the listed company participating in tax amnesty will restate its 2015 financial statement. The result shows that 131 listed companies participated in tax amnesty program.

Even though the financial statement has been audited, when the listed company participate in tax amnesty and reveal its hidden asset in significant amount, the company must restate its financial statement. Restatement of audited financial statement can be an indication that the previous audited financial statement did not report the truly condition about auditee's financial condition or the auditor might have been missed the material misstatement. It raised an intriguing question about the audit quality of the financial statement, especially when the financial statement gets unqualified opinion.

International standard on auditing 200 regulate that during expressing its financial statements' opinion, auditor must be able to obtain reasonable assurance that the financial statements are free from material misstatement, whether due to fraud or error [4].

² Based on Indonesia Income – Tax Law 2008 article 17

³ Basen on Indonesian Tax Amnesty Law 2016

Audit quality can be clarified as auditor's ability to detect and report misstatement and meet the legal and professional requirement [5]. Based on supply side, the audit firm will perform higher audit quality when it has more technical knowledge of a client's industry [6]. Big 4 auditors (i.e. PwC, EY, Deloitte, and KPMG) are multinational accounting firms which are organized as national partnerships with national administrative offices. In order to maintain its quality, they established standardized audit programs and apply the knowledge-sharing practices. Consequently, the Big 4 tend to invest heavily on staff recruitment and training and information technology [7].

This research aims to observe whether the audit quality has an effect on the tax amnesty participation. The research defines audit quality as auditor's reputation, auditor's industry specialization and auditor's tenure. The research contributes a finding that company which is audited by BIG 4 audit firm will impose the higher audit quality, consequently the company will less likely to participate in tax amnesty.

2 Hypothesis Development

Several previous researchers have showed the indication of audit quality of the Big – 4 accounting firms. In order to maintain its quality, regarding the restrain of abnormal accruals, the Big 4 are more likely to issue unclean opinion. It reflects that the Big 4 provide more conservative accounting in order to prevent future litigation and possible reputation damages [7]. Regarding financial standard compliance, company which audited by Big-5+2 auditor are exhibit greater IFRS compliance [8]. In order to reduce information asymmetry, manager from “less secretive” or more transparent company are more commit to higher-quality audits by choosing a Big 4 auditors [9]. Moreover, company which located in countries with high corporate ethical values are more likely to hire a Big 4 auditor [10]. Big 4 auditors are persistent in maintaining their good reputation and conducting a thorough audit that will decrease the likelihood of audit failures [11]

In Indonesia, the top – tier accounting firm is associated with Big-4 (e.g. PwC, Deloitte, KPMG and EY). Based on previous studies, Big 4 are associated with high audit quality, moreover, Big 4 auditors eager to protect their reputation by not involving in future audit failures, therefore they audit their client thoroughly in the engagement period. This implied that companies audited by Big 4 auditors in 2015 will less likely to participate in tax amnesty because of the higher audit quality.

H1: Auditors' reputation negatively related to participation in tax amnesty program, participation in tax amnesty program in 2016, 2017, or both, and the amount of restatement caused by tax amnesty.

Previous studies show that industry specialized auditors provided higher audit quality. Auditee of industry specialized had a higher ranking from financial analysts in disclosure quality [12]. Industry specialized auditor also gave a higher assurance level [13]. It lead to

a hypothesis that auditee of industry specialized auditors will less likely to participate in tax amnesty program since they had been imposed by higher audit quality compare with non industry specialized auditors

H2: Auditors' industry specialization negatively related to participation in tax amnesty program, participation in tax amnesty program in 2016, 2017, or both, and the amount of restatement caused by tax amnesty.

Longer audit tenure will impact on audit committee's effectiveness and decrease audit quality [14]. Audit quality decreased in longer tenure because of auditors' reluctance to issue going concern opinion. It can be conclude that prolong audit tenure with clients could be the cause of lower independence and objectivity due to familiarity threat [15]. When a client has a good control in financial reporting, accurate, low risk and integrity and competence top management, automatically, in the future audit engagement, the professional skepticism will decline with tenure. On the other hand, a new audit firm will have new perspective and bear the skepticism [16]. It lead that long auditor tenure leads to a reduction in audit quality. Consequently, the auditee which has been audited by long tenure accounting firm will be audited by less quality so they will more likely to participate in tax amnesty program.

H3: Audit tenure positively related to participation in tax amnesty program, participation in tax amnesty program in 2016, 2017, or both, and the amount of restatement caused by tax amnesty.

3 Methodology and Sample Selection

3.1. Dependent Variable

Participation in Tax Amnesty (RESTATE/NOT)

In order to test the Hypothesis, whether or not the company participates in tax amnesty during the tax amnesty period, the research uses binomial logistic model. If the company participates in tax amnesty, 1 would be given. If not, it would be 0.

Year of Participation in Tax Amnesty (RESTATE_CATEGORIES)

Regarding hypothesis testing for robustness test, the research uses multinomial logistic model. It would be inputted 0 when the company didn't participate in tax amnesty, 1 if the company participated in 2016, 2 if the company participated in 2017, and 3 if the company participated in both 2016 and 2017.

Tax Amnesty Restatement Amount (RESTATE_AMOUNT)

Robustness test of the research will test of the amount of tax amnesty restatement amount. The research will use multiple linear regression method. The restatement amount is regarding the revealing of hidden asset in tax amnesty. This amount is disclosed in Notes of Financial Statement.

3.2. Independent Variable

Auditor's Reputation (REPUT)

If the auditor is Big 4 auditor, the auditor would be seen as having a good reputation and it would be given a value of 1. Otherwise, it would be given a value of 0.

Auditor's Industry Specialization (SPEC)

Auditor's industry specialization would be measured using the market share with regard to the total assets of the company [17].

$$SPEC = (\text{Total asset of all clients audited by particular audit firm in a particular industry}) / (\text{Total assets of all company in the industry})$$

Audit Tenure (TENURE)

Tenure is measured by counting backwards of how long a signing audit partner have audited the company from 2015. Instead of counting the accounting firm tenure, this research uses audit partner tenure. Audit partner is used as the indicator because audit partner is seen as the one who can build relationship with a client that can result in familiarity and biasness in giving opinion. Moreover, Indonesian Government's Law No.20 in 2015 article 11 stated the rules regarding rotation of audit partner for every 5 years, not public accounting firm's rotation.

3.3. Control Variable

The research uses several variables to control the model including firm size, leverage, number of operation segments, and number of subsidiaries. We also incorporate type of industry to mitigate the potential confounding effects across industries.

3.4. Sample Selection

Sample selection used non probability sampling method that is purposive judgmental sampling. There are 3 criteria used for sample of this study, (1) companies must be listed in Indonesia Stock Exchange in 2015-2017, (2) companies must also have already published financial statements 2015-2017, (3) the financial statement must be disclosed in Rupiahs. Lastly, the financial statement must be consisted of all information needed in the model. This process yielded 404 firms for binomial and multinomial logistic regression and 385 firms for multiple linear regressions. We used 2016 and 2017 data for dependent variables and 2015 data for independent and control variables.

3.4. Empirical Model

In this study use three regression models, i.e binomial logistis regression, multinomial logistic regression and multiple linear regression. The model is Y as a function of (REPUT, TENURE, SPEC, SIZE, LEV, SEGMENT, SUBS, DMANUF, DFIN, DSERV, DTRADING). Y is a dependent variable, which one of these: (1) RESTATE/NOT, a dummy variable set to 1 if company participates in tax amnesty program and 0 otherwise, (2) RESTATE_CATEGORIES, a multinomial variable set to 0 if the company didn't

participate in tax amnesty, 1 if it participated in 2016, 2 if it participated in 2017, and 3 if it

participated in both 2016 and 2017, (3) RESTATE_AMOUNT, restatement amount caused by tax amnesty, which is transformed using Johnson transformation. REPUT is a dummy variable set to 1 if Big 4 and 0 otherwise. SPEC is market share with regards of company's total assets. TENURE is tenure of signing audit partner. SIZE is log of total assets. LEV is total debt/total equity. SEGMENT is number of operation segments. SUBS is number of subsidiaries. DMANUF is a dummy variable set to 1 if company operate in manufacture industry and 0 otherwise. DFIN is a dummy variabel set to 1 if company operate in financial industry and 0 otherwise. DSERV is a dummy variabel set to 1 if company operate in others service industry, and 0 otherwise. DTRADING is a dummy variabel set to 1 if company operate in trading industry, and 0 otherwise.

4 Result and Discussion

4.1 Binomial Logistic Regression

Hosmer and Lemeshow's Goodness of Fit of this study is 0.269 which is lower than 0.05, indicating the fitness of the model. Nagelkerke R Square of this study is 0.258, meaning independent and control variables explained 25,8% of variations of the dependent variable.

Table 1. Binomial Logistic Regression Result

Independent Variable	B	Sig.	Exp(B)
REPUT	-1.594	0.000*	0.203
TENURE	0.033	0.830	1.033
SPEC	0.232	0.839	1.261
SIZE	-0.269	0.133	0.764
LEV	-0.113	0.050*	0.893
SEGMENT	0.033	0.679	1.033
SUBS	0.042	0.000*	1.043
DMANUF	-0.398	0.366	0.672
DFIN	0.281	0.571	1.324
DSERV	0.264	0.532	1.302
DTRADING	0.543	0.300	1.722

Constant	3.325	0.115	27.792
----------	-------	-------	--------

Based on the estimated parameter, Equation (1) is:

$$y = p/(1-p) = e^{(3.325 - 1.594 \text{ REPUT} + 0.033 \text{ TENURE} + 0.232 \text{ SPEC} - 0.269 \text{ SIZE} - 0.113 \text{ LEV} + 0.033 \text{ SEGMENT} + 0.042 \text{ SUBS} - 0.398 \text{ DMANUF} + 0.281 \text{ DFIN} + 0.264 \text{ DSERV} + 0.543 \text{ DTRADING})} \dots\dots\dots(1)$$

REPUT is significant negative which imply that companies audited by Big 4 had lower probability of 0.203 times ($e^{-1,594}$) in participating the tax amnesty program compare with companies audited by non-Big 4. Meanwhile, leverage and subsidiaries have significant effect. Companies that have lower leverage have higher probability of participating in tax amnesty program. On the other hand, the higher the number of subsidiaries, the higher the probability of participating in tax amnesty program.

4.2 Multinomial Logistic Regression

Table 2. Multinomial Logistic Regression Result - Significant Only

RESTATE_CATEGORIES		B	Sig.	Exp(B)
1 (tax amnesty in 2016)	SUBS	0.045	0.000	1.046
	[REPUT=0]	1.494	0.001	4.453
2 (tax amnesty in 2017)	[REPUT=0]	2.141	0.011	8.505
	SUBS	0.049	0.000	1.050
3 (tax amnesty in 2016 & 2017)	[REPUT=0]	1.489	0.012	4.433

$$\text{Ln} \frac{P(2016)}{P(\text{tidak restate})} = 3.412 + 1.494 \text{ REPUT} + 0.187 \text{ TENURE} - 0.127 \text{ SPEC} - 0.3 \text{ SIZE} - 0.103 \text{ LEV} + 0.013 \text{ SEGMENT} + 0.045 \text{ SUBS} + 0.156 \text{ DMANUF} - 0.71 \text{ DFIN} - 0.709 \text{ DSERV} - 1.040 \text{ DTRADING} \dots\dots\dots(2)$$

$$\text{Ln} \frac{P(2017)}{P(\text{tidak restate})} = - 3.659 + 2.141 \text{ REPUT} - 0.639 \text{ TENURE} + 0.429 \text{ SPEC} - 0.022 \text{ SIZE} - 0.132 \text{ LEV} + 0.143 \text{ SEGMENT} + 0.004 \text{ SUBS} + 0.463 \text{ DMANUF} + 0.093 \text{ DFIN} + 0.880 \text{ DSERV} + 0.106 \text{ DTRADING} \dots\dots\dots(3)$$

$$\text{Ln} \frac{P(2016 \text{ dan } 2017)}{P(\text{tidak restate})} = - 0.092 + 1.489 \text{ REPUT} + 0.030 \text{ TENURE} + 0.879 \text{ SPEC} - 0.318 \text{ SIZE} - 0.13 \text{ LEV} - 0.011 \text{ SEGMENT} + 0.049 \text{ SUBS} + 0.825 \text{ DMANUF} + 0.571 \text{ DFIN} - 0.016 \text{ DSERV} + 0.083 \text{ DTRADING} \dots\dots\dots(4)$$

Table 2 shows the significant result of multinomial logistic regression result based on equation 2, 3, and 4. Prior to this, we already test the fitness of the model. REPUT=0 has

significant positive impact in category 1, 2, and 3. This means companies audited by non-Big 4 auditors have higher probability to participate in tax amnesty program in 2016, 2017, or both (2016 and 2017) compare with companies audited by the Big-4. Meanwhile, SUBS has significant positive impact. This means increase in number of subsidiaries would increase the probability of company participating in tax amnesty program in 2016 and both years.

4.3 Multiple Linear Regression

Table 3. Multiple Linear Regression Result

Independent Variable	Regression Coefficient	t	Sig. (2-tailed)	Sig. (1-tailed)
(Constant)	-0.734	-1.354	0.177	0.0885
REPUT	-0.323	-3.614	0.000	0.000*
SPEC	-0.194	-0.697	0.486	0.243
TENURE	0.058	1.467	0.143	0.0715
SIZE	0.068	1.472	0.142	0.071
LEV	-0.027	-1.913	0.056	0.028
SEGMENT	0.018	0.920	0.358	0.179
SUBS	0.008	4.248	0.000*	0.000
DMANUF	-0.075	-0.643	0.521	0.2605
DFIN	-0.036	-0.279	0.781	0.3905
DSERV	0.169	1.493	0.136	0.068
DTRADING	0.113	0.812	0.417	0.2085

Based on the estimated parameter, Equation (5) is:

$$\text{RESTATE_AMOUNT} = -0.734 - 0.323 \text{ REPUT} - 0.194 \text{ SPEC} + 0.058 \text{ TENURE} + 0.068 \text{ SIZE} - 0.027 \text{ LEV} + 0.018 \text{ SEGMENT} + 0.008 \text{ SUBS} - 0.075 \text{ DMANUF} - 0.036 \text{ DFIN} + 0.169 \text{ DSERV} - 0.056 \text{ DTRADING}$$

The F-Test of this model is 0.000 which is less than 5%, meaning the independent and control variables simultaneously have significant impact on dependent variable. The F-test result also indicate the fitness of the equation model. The adjusted R^2 in this study is 0.184 which means that independent and control variables explained 18.4% of the dependent variables.

Refer to table 3, REPUT had significant negative impact. It means companies audited by Big 4 have lower restatement amount caused by participation in tax amnesty program. Meanwhile, the only significant control variable is SUBS. SUBS had significant positive

impact. It means that the higher the number of subsidiary, the higher the number of restatement amount caused by participation in tax amnesty program.

4. 4 Analysis and Discussion

Based on binomial logistic regression, multinomial logistic regression, and multiple linear regression, Auditor's reputation (REPUT) has significant negative impact to participation in tax amnesty program.

Binomial logistic regression show that companies audited by Big 4 had lower probability in participating the tax amnesty program 0.203 times compare with company audited by non-big-4. multinomial logistic regression demonstrate that companies audited by Big 4 had lower probability in participating the tax amnesty program in year 2016, year 2017, and participate in both 2016 and 2017. Lastly, multiple linear regression shows that companies audited by Big 4 have lower restatement amount regarding participation in tax amnesty program.

This implied that Big 4 public accounting firm produce a higher quality audited financial statement than non-Big 4 public accounting firm. This is because Big 4 auditors are superior in obtaining learning experiences with a better skill and knowledge than non-Big 4 auditors, even in short tenure [18]. This leads to them conducting a more in-depth audit and have found all of the clients' assets, including the hidden ones, thus producing a higher quality audited financial statements than non-Big 4 auditors. It is different for non-Big 4 auditors whose audit quality is lower, allowing their clients' hidden asset to remain undisclosed in 2015 audited financial statement and leading their clients to finally uncover the hidden assets whilst participating in tax amnesty program and restating their 2015 financial statement.

For non-Big 4 clients, it means less or no hidden assets to be revealed in tax amnesty program because all of the assets are already revealed during the engagement period and disclosed in 2015 audited financial statement. Therefore, it is less likely for companies which audited by Big 4 auditors to participate in tax amnesty program.

Auditor's industry specialization has no significant impact to participation in tax amnesty program. Audit tenure also has no significant impact to participation in tax amnesty program. This is because one until 4 years engagement is not long enough tenure to build a closed relationship between audit partner and client that can cause biasness in audit opinion.

5 Conclusion

Audit quality measured by auditor's reputation has significant negative impact with tax amnesty. Companies that were audited by Big 4 in 2015 have lower probability of participation in tax amnesty program, participation in tax amnesty program in 2016,

2017, or both, and lower amount of restatement caused by participation in tax amnesty. This is because Big 4 produce a higher quality audited financial statements. Big 4 are superior in obtaining learning experiences (Chi and Huang, 2005). Big 4 also wanted to protect their reputation from any possible damages, thus leading them to an in-depth audit in the engagement period (Becker et al., 1998).

We also found that leverage had significant negative impact on participation in tax amnesty program. The lower the leverage, the more likely the company participates in tax amnesty program. This is because lower leverage could indicate that company participates in nondebt tax shields (DeAngelo and Masulis, 1980 and Graham and Tucker, 2006). Meanwhile, subsidiary had significant positive impact on participation in amnesty program, participation in tax amnesty program in 2016, 2017, or both, and lower amount of restatement caused by participation in tax amnesty. This is because there is a possibility of assets hidden in tax haven that were uncovered in tax amnesty program.

For further studies, the proxy of audit quality could be varied using other proxies, such as discretionary accruals. Some control variables can also be added to further reflect the dependent variables, such as using foreign subsidiary ownership as an indicator of possible hidden assets that maybe uncovered in tax amnesty program.

THE CHAIR'S SPEECH

THE 1st INTERNATIONAL CONFERENCE ON BUSINESS, LAW AND PEDAGOGY (ICBLP)

"Trends and Collaborations of Business, Law, and Pedagogy in Disruptive Era"

13 - 14th FEBRUARY 2019

THE SUN HOTEL SIDOARJO, INDONESIA

Bismillahirrohmanirohim,

Dear First ICBLP 2019 Keynote Speakers, Presenters and Participants,

It's a great pleasure that we welcome you to our amazing event, the first edition of the International Conference on Business, Law, and Pedagogy, ICBLP 2019.

First of all, we would like to thank all of you for your participation at this conference. We realize that all of you have made big effort to join us here, doing hard scientific thinking, obtaining funding, long way traveling and so many on, thank you very much. I do, appreciate your attendance.

In the first ICBLP 2019, we proudly present the theme, "Trends and Collaborations in Business, Law, and Pedagogy in Disruptive Era." Our environment always changing, adaptation not enough, we need a more sophisticated strategy to face it.

Stepping ahead in front of the change by knowing trends and making synergy collaborations in business, law, and pedagogy is a must in the disruptive era today. Let's make the conference an unforgettable one. There will be presenting almost 250 articles, and about 500 researchers involve in this conference.

Last but not least, we would like to thank and with great honor to our Narotama University, Co-Host Universities : Universitas Darussalaam Gontor, Institut Pendidikan Indonesia Garut, Universitas Muhammadiyah Sidoarjo, Universitas Widya Gama Samarinda, Universitas Wijaya Putra Surabaya, Universitas Muhammadiyah Surabaya, STKIP Tulungagung, and APPII. Welcome to our valuable Keynote Speakers, Scientific, Steering and Organizing Committee members and Sponsors that make this conference fabulous.

We do hope that you enjoy your attendance at the First ICBLP 2019.

Warm Regards, Wassalaamualaikum, wr. Wb.

Sidoarjo, 13 February, 2019

Dr. Reswanda
Chairman ICBLP 2019

WELCOME NOTE

ON THE 1st INTERNATIONAL CONFERENCE ON BUSINESS, LAW AND PEDAGOGY (ICBLP)

"Trends and Collaborations of Business, Law, and Pedagogy in Disruptive Era"

13-14th FEBRUARY 2019

THE SUN HOTEL SIDOARJO, INDONESIA

Bismillahirrahmanirrahim Warahmatullahi Wabarakatuh, Om Swastiastu, Om Namo Buddhaya, Salam Kebajikan. May peace be with all of us.

Alhamdulillah let us extend our highest gratitude to Allah SWT, the Almighty God, for all of His blessing and mercy to us, so that we can encounter one another in the First International Conference on Business, Law and Pedagogy with theme "Trends and Collaborations of Business, Law, and Pedagogy in Disruptive Era".

ICBLP 2019 activity is a joint work of Narotama University Surabaya with several other universities and sponsors. At this opportunity I, as a Rector of Narotama University, would like to deliver my gratitude to our valuable keynote Speakers:

Prof. Dr. Bambang Tjahjadi, SE., MBA., Ak., CMA (Indonesia)

Prof. Dr. Tatiek Sri Djatmiati, S.H., M.S (Indonesia)

Prof. Dr. Irwandi Jaswir (Malaysia)

Andrew Hunt, M.A (UK)

Abdarahman M. Kalifa, M.SA (Libya)

Christopher Alan Woodrich, M.A (Canada).

Today is a special, such huge bless for our university that we can host this great event and see participants across the globe from different disciplines of education gather and share their expertise, knowledge, and experience. With all due respect, therefore, we would like to express our great appreciation to our prominent speakers and delegates who came from Indonesia, Malaysia, UK, Libya and Canada, I would like to welcome and warmly greet from us, Narotama University. It is an honor to have you here. We have around 200 participants from various universities from Indonesia, Malaysia, UK, Libya and Canada gathered here today.

This International Conference was held in response to global issues in the Disruptive Era which had an impact on the fields of Business, Law and Education. Through this conference, it is expected to find ideas and opportunities for education and business people to discuss the key points of success in taking the opportunity to progress in the business, law and education sectors. In particular, the conference discussed the issue of trends and collaboration that can be done in maintaining the continuity of business and education in the prevailing legal order and adopting all inequalities that occur in this disruptive era.

Universitas Narotama is proud to be appointed as the organizing leader and host of this event, bringing together well-known experts in their respective fields to address vital issues in the fields of business, law and education. Cutting out all disciplines where collaborative research is becoming increasingly important today, given that innovation and R & D are the main drivers of economic growth and community development throughout the world.

This conference, however, will not be just simply a "talk". At the end of the event, a series of recommendations are expected, which can be used as a reference and input for business, policy, government, education in facing challenges in the disruptive era.

On this occasion, I would like to thank the Local Organizing Committee, chaired by Dr. Reswanda, and the Committee members, both lecturers and students for their hard work and efforts in planning and coordinating this great event.

I would also like to thank the co-hosts including, Universitas Darussalaam Gontor, Institut Pendidikan Indonesia Garut, Universitas Muhammadiyah Sidoarjo, Universitas Widya Gama Samarinda, Universitas Wijaya Putra Surabaya, Universitas Muhammadiyah Surabaya, STKIP Tulungagung, and APPH, as well as our sponsors for their support in enabling this conference to be carried out properly.

Last but not least, thank you for your participation and support to our International Conference on Business, Law and Pedagogy. We wish you the most productive conference and interesting discussions over the next two days. I hope everyone who joins the conference can turn out to be a success.

Thank you,

Arasy Alimudin

Rector of Universitas Narotama Surabaya

Email : permataayu@staff.ubaya.ac.id

Abstract

Tax amnesty is an Indonesian government program which company reveals its hidden asset. It turned out that many company hiding its asset participated in this program. That condition raises question regarding audit quality of financial statement of those companies. Audit quality is proxied by accounting firm's reputation, industry specialization, and tenure. The research shows that accounting firm's reputation had significant negative impact on participation in tax amnesty program in 2016, 2017, or both, and the amount of restatement regarding tax amnesty program. In addition, leverage as control variable had significant negative impact on participation in tax amnesty program.

Keywords : audit quality, accounting firm's reputation, tax amnesty, restatement
