ABSTRAK

Bonek merupakan salah satu supporter sepak bola yang cukup terkenal di kalangan masyarakat Surabaya. Bonek sering menjadi topik pembicaraan di media maupun di masyarakat sendiri karena perilakunya yang dinilai agresif. Saat ini belum ada penelitian yang meneliti tentang persepsi perilaku agresif Bonek dan dampak terhadap masyarakat. Penelitian ini memiliki tujuan untuk menguji hubungan antara persepsi perilaku agresif dengan kecemasan pada masyarakat Surabaya terhadap supporter Bonek. Penelitian ini bersifat kuantitatif korelasional. Partisipan penelitian ini (N=311) merupakan warga berdomisili di Surabaya, berusia minimal 14 tahun, dan memiliki pengalaman langsung akan perilaku agresif supporter Bonek. Sampel penelitian diperoleh dengan teknik *accidental sampling*. Data diambil menggunakan skala persepsi agresi (*aggression questionnaire*) dan kecemasan (*state trait anxiety inventory*). Hipotesis penelitian ini diuji menggunakan uji korelasi pearson. Hasil analisis menunjukkan terdapat hubungan positif antara persepsi agresi dengan kecemasan ($r = 0.659$; $p = 0.001$). Dapat disimpulkan bahwa semakin tinggi persepsi agresi maka semakin tinggi juga kecemasan pada masyarakat. Agresivitas Bonek dipersepsi sedang cenderung tinggi muncul dari pengalaman dan menimbulkan perasaan terancam dan kecemasan pada masyarakat Surabaya.

ABSTRACT

Bonek is a football supporter who is quite well known among the people of Surabaya. Bonek is often a topic of conversation in the media and in society because of his aggressive behavior. Currently, no research has examined Bonek's perceptions of aggressive behavior and its impact on society. This study aims to examine the relationship between perceptions of aggressive behavior and anxiety in the Surabaya community towards Bonek supporters. This research is correlational quantitative. Participants of this study (N = 311) are residents who live in Surabaya, are at least 14 years old, and have direct experience of the aggressive behavior of Bonek supporters. The research sample was obtained by accidental sampling technique. Data were taken using a scale of perception of aggression (aggression questionnaire) and anxiety (state trait anxiety inventory). The research hypothesis was tested using the Pearson correlation test. The analysis showed that there was a positive relationship between perceived aggression and anxiety ($r = 0.659$; $p = 0.001$). It can be concluded that the higher the perception of aggression, the higher the anxiety in society. Bonek's aggressiveness is perceived as being high tends to emerge from experience and creates feelings of threat and anxiety in the people of Surabaya.
