The utilization of natural dyes from natural resources in fashion industry is preferred than synthetic dyes as the natural dyes is considered as more environmentally friendly than synthetic dyes. In addition, dyes from natural resources, such as plant, are renewable resources that can be sustainably used. In recent years dye from *Mangifera* has been used widely as sources for yellow color in fashion industry. However, there are still more studies need to investigate the effects of solvent to material ratio during extraction process to attain a standard color that can be applied in industry. Thus, this study focused on the extraction process of dye from *mangifera* leaf to optimize and provide recommendation

about the best solvent and the ratio of solvent to material used in the dyeing process. Experimental results showed that the best solvent for *Mangifera indica* extraction process is methanol. In addition, the best material to solvent ratio to obtain maximum yield was 1 : 7.

PREFACE

WELCOME FROM InCITE 2021 ORGANIZING COMMITTEE

Welcome to InCITE 2021! The third bi-annual international conference on engineering domain conducted by the Faculty of Engineering, The University of Surabaya (UBAYA). Due to the COVID-19 pandemic, InCITE 2021 is held as an online conference. Online conference opens the opportunity for many researchers around the globe to share their findings and learn from other global researchers with less restrictions.

InCITE 2021 invites three keynote speakers, well reputable global researchers in their research domain from Australia and Taiwan. Following each keynote session are two presentation sessions run in parallel.

This year, we received 66 papers submitted by researchers from four distinct countries (i.e., first author's country of origin): Indonesia, Australia, Taiwan, and Kazakhstan.

We employed a double-blind review to ensure a high standard and a minimum level of bias in the reviewing processes. This resulted in 56% of the submissions were accepted and will be published to the AIP Conference Proceedings.

Authors of all accepted papers are to disseminate their findings during InCITE 2021 conference between 25 to 26 of August 2021. This presents a great opportunity for everyone, including the researchers, to discuss and further improve current achievements.

We thank all keynote speakers, presenters, and reviewers/scientific committees for the generous supports. We thank the University of Surabaya, the Faculty of Engineering UBAYA, and all InCITE 2021 committees that enable InCITE 2021.

We wish you a very pleasant and rich conference experience in InCITE 2021 and looking forward to seeing you again on InCITE 2023! Thank you.

Yours sincerely,
Asst. Prof. Dr. Jimmy

ACKNOWLEDGMENT

International Conference on Informatics, Technology and Engineering 2021 (InCITE 2021) Organizing Committee wishes to express its gratitude and appreciation to:

Dr. Ir. Benny Lianto, MMBAT., Rector of Universitas Surabaya for consenting to be the guest of honour

All invited speakers session, moderators and conference speakers, for their participation

All conference sponsors, supporters, exhibitors and advertiser for their generous support

All participants and other who have in one way or another contributed towards the success of this conference

KEYNOTE SPEAKERS

Dr. Ahmed Mourad

Dr. Ahmed Mourad is a Postdoctoral Research Fellow at the Information Engineering Lab (ielab), University of Queensland. His current research focuses on Conversational Systems in the context of Agricultural domain. AgAsk is a conversational agent that will provide access to agricultural R&D output (which is currently locked away into project reports, communications and scientific publications) leading directly to better, data-driven growing decisions. Through machine learning driven question-answering systems, AgAsk will elicit and understand growers information needs and preferences, providing contextualised access to insights in agricultural R&D.

He completed his PhD in Computer Science at RMIT University in 2019 under the supervision of Professor Mark Sanderson, Professor Falk Scholer and Associate Professor Walid Magdy. His research focused on the Influence of geographic biases on geolocation prediction in Twitter. Before the PhD, He worked as a Research Assistant at Qatar Computing Research Institute (QCRI) focusing on Information Retrieval and Sentiment Analysis on Arabic datasets. He also worked as a Software Engineer at large corporates including Microsoft and Mentor Siemens.

Prof. Chuan-Kai Yang, Ph.D

Prof. Chuan-Kai Yang, Ph.D received his Ph.D. degree in computer science from Stony Brook University, USA, in 2002, and his M.S. and B.S. degree in computer science and in mathematics from National Taiwan University in 1993 and 1991, respectively. He served as the chairman for the department of information management, National Taiwan University of Science and Technology, Taiwan, from 2017 to 2019, and is currently a Professor in the department. His research interests include computer graphics, scientific visualization, multimedia systems, and computational geometry. He has published over hundreds of research papers, including more than 30 SCI journal papers and more than 40 international conference papers.

Dr. Anton van der Vegt

Anton completed his PhD in Information Retrieval from The University of Queensland, co-sponsored by CSIRO. His research investigated the impact of time and knowledge constraints on the ability of clinicians to make high quality clinical decisions in the context of using a search engine to support this task. Anton proposed a minimal interaction framework, as an alternative to the traditional SERP (Search Engine Results Page) approach to clinical search. As a result of his research, numerous papers have been published in high ranking journals such as JASIST, JMLA and JDOC.

Prior to his PhD studies, Anton spent four years working in the UK, supporting the implementation of the National Programme for IT into the NHS; this included development and installation of clinical and administrative software systems to connect patient care across the UK. Through this work he developed a much better understanding of the unique challenges faced by clinicians and public healthcare organisations when implementing such systems. This experience, together with his thesis research informs his current role as PostDoctoral Research Fellow with EMPOWER, a Joint Venture between Queensland Health and the University of Queensland. The purpose of this JV is to create a scalable platform for clinicians to access intelligent information to improve clinical outcomes across Queensland.
