ABSTRACT

Along with the rapid advancement of information technology with the presence of the internet, it is necessary for every business actor to adapt by providing online services to his customers. In the banking sector, mobile banking facilities have been provided by banks that allow customers to conduct online banking transactions so that customers do not need to come to the bank. This study aims to determine the factors that influence the use of Bank Central Asia's mobile banking. This study uses a quantitative approach that uses an online questionnaire filled out by Bank Central Asia customers in Indonesia with 300 respondents. The data were analyzed using the Structural Equation Model (SEM) technique using AMOS software. The results of this study indicate that performance expectancy, effort expectancy, social influence, facilitating conditions, habit, hedonic motivation, perceived value, and trust have a positive effect on adoption intention. Then adoption intention has a positive effect on usage behavior. However, perceived risk have no effect on adoption intention.

Keywords: Adoption Intention, Bank Central Asia, Mobile Banking
