Abstract

Background

It is believed that positive interactions and exchanges of information within a healthcare team contribute to good quality care in any context. In Indonesia, there may be limitations on interaction and information exchange because of the hierarchical structure of organizations. Culture, hierarchy, and perceived rank affect how individuals behave and interact among professions in healthcare teams. This study aimed to identify the perceptions of each profession on the practice of inter-professional collaboration in their respective work units.

Method

The study was conducted among health care practitioners involved in antibiotic use in hospitals. Data were collected using the Collaborative-Practice Assessment Tool (CPAT) questionnaire of eight domains (53 questions). The correlation coefficient value for the 53 questions was >0.3, with a significance level of 5%. The reliability of the CPAT questionnaire was good, with Cronbach's alpha of 0.977.

Result

There were 261 respondents. The perception scores of each profession about inter-professional collaboration were 3.55–3.82. The domain that had the highest score was 'the relationship between members'; and the lowest scores was 'decision-making and conflict management'. A statistically significant difference was found in the perception towards the practice of inter-professional collaboration between pharmacists and other professions.

Conclusion

Perceptions of inter-professional collaboration of each profession in hospitals differ. Communication between professions in distributing tasks and roles when interacting is needed so that each profession can contribute optimally.

Section snippets

Key message

Inter-professional collaborative practice can improve health care services to the patient. Communication between professions in distributing tasks and roles when interacting is needed so that each profession can contribute optimally. Agreement on the therapy goals, how to review, and how to make decisions for therapy for the patient will improve the quality of service and patient therapy outcomes. Successful implementation of interventions is associated with an organisation's needs.

This study...

Methods

The study population were health care practitioners who cared for patients in the surgical and obstetrics-gynecology (ob-gyn) unit, including doctors, pharmacists, nurses, and midwives, in three type B hospitals in East Java; Bangil Regional General Hospital (Pasuruan), Husada Utama Hospital (Surabaya), and Hajj General Hospital (Surabaya). Bangil Regional General Hospital, the government hospital, has 323 beds; Husada Utama Hospital, a private hospital, has 235 beds; and Hajj General Hospital, ...

Ethical considerations

This study received research permissions from Husada Utama Hospital (Surabaya) Number 1338/RSHU/Dir./XI/2020 and 1339/RSHU/Dir./XI/2020; and ethical approval from the Health Research Ethics Team of the Bangil Regional General Hospital (Pasuruan) Number 445.1.22.424.072.01/2020, the University of Surabaya Institutional Ethical Committee Number 143/KE/XI/2020 and 144/KE/XII/2020 (Husada Utama Hospital, Surabaya), Health Research Ethics Committee Hajj General Hospital (Surabaya) Number...

Results

There were 261 respondents from the three hospitals (Table 1). The response rates in two hospitals were 100%; the third hospital had a 97% response rate (3 out of 98 respondents didn't return the questionnaire). The majority of the study participants were aged 30–40 years (43.30%) and female (82.38%) (Table 1). The respondents were nurses (48.28%), midwives (30.65%), doctors (specialists) (10.73%), and pharmacists (10.34%).

Scores reflected participants' agreement about the importance of trust and...

Discussion

Whenever there is an interaction between team members, there is an exchange of knowledge/information. Pharmacists having lower scores for perception of collaborative practice refers to the less frequent interaction and exchange of information/knowledge of pharmacists compared to doctors, nurses, and midwives.¹⁸

The interaction and exchange of information between the pharmacist profession and doctors or nurses varies, depending on the pharmacist's ability and role. Lack of consensus on...

Conclusion

Inter-professional interaction in Indonesia is not optimal.²³ There is a hierarchical communication structure.⁴⁵ Pharmacists had lower perceptions of their role in inter-professional collaboration than other professions. The profession's perceptions of their role in the team, how they perceived other professions' views of pharmacists, and other professions' perceptions of their professional role, influenced health care practitioners' perceptions about inter-professional collaboration practice....

Funding

This study was supported with a research grant No. 072/ST-Lit/LPPM-01/KemendikbudRistek/Multi/FF/III/2022 from Ministry of Research, Technology and Higher Education of the Republic of Indonesia (Kementerian Riset, Teknologi dan Pendidikan Tinggi, Menristekdikti)...

Ethical approval

This study received research permissions from Husada Utama Hospital (Surabaya) Number 1338/RSHU/Dir./XI/2020 and 1339/RSHU/Dir./XI/2020; and ethical approval by the Health Research Ethics Team of the Bangil Regional General Hospital (Pasuruan) Number 445.1.22.424.072.01/2020, the University of Surabaya Institutional Ethical Committee Number 143/KE/XI/2020 and 144/KE/XII/2020 (Husada Utama Hospital, Surabaya), Health Research Ethics Committee Hajj General Hospital (Surabaya) Number...

SCOPE

Journal of Interprofessional Education & Practice, a quarterly online-only journal, provides innovative ideas for interprofessional educators and practitioners through peer-reviewed articles and reports. Each issue examines current issues and trends in interprofessional healthcare topics, offering progressive solutions to the challenges facing the profession. The Journal of Interprofessional Education & Practice (JIEP) is affiliated with University of Nebraska Medical Center and the official journal of National Academies of Practice (NAP) and supports its mission to serve the public and the health profession by advancing education, policy, practice & research.

N Nadine 6 months ago

Where can we find the journal ranking?

reply

Melanie Ortiz 6 months ago

Dear Nadine, thank you very much for your request. You can consult that information just above. Best Regards, SCImago Team

P Findley 4 years ago

What is your impact factor? I see all of the graphs, but the impact factor itself is not clear. Thanks

reply

Melanie Ortiz 4 years ago

Dear P. Findley, thank you very much for your comment. SCImago Journal and Country Rank uses Scopus data, our impact indicator is the SJR. Check out our web to localize the journal. We suggest you consult the Journal Citation Report for other indicators (like Impact Factor) with a Web of Science data source. Best Regards, SCImago Team

Usua, Oku Bassey 5 years ago

I wish to receive notification when, how and the amount involved to publish a paper.

reply

Melanie Ortiz 5 years ago

SCImago Team

Dear user,

thank you for contacting us.

Sorry to tell you that SCImago Journal & Country Rank is not a journal. SJR is a portal with scientometric indicators of journals indexed in Elsevier/Scopus.

Unfortunately, we cannot help you with your request, we suggest you to visit the journal's homepage or contact the journal's editorial staff, so they could inform you more deeply.

You can see the updated journal's information just above.

Best Regards, SCImago Team

The users of Scimago Journal & Country Rank have the possibility to dialogue through comments linked to a specific journal. The purpose is to have a forum in which general doubts about the processes of publication in the journal, experiences and other issues derived from the publication of papers are resolved. For topics on particular articles, maintain the dialogue through the usual channels with your editor.
