ABSTRACT

At a time when the tourism industry and other creative economies are experiencing a decline due to the Covid-19 pandemic, the video game industry has experienced a significant increase. Video game development from local game developers makes a major contribution to the country's economy. In mobile games, pop up advertising is an effective advertising strategy with a high conversion rate. Seeing this growth, game publishers use pop-up advertising in mobile games for advertising. This research is about the advertising value of pop-up advertising and its influence on the status of inspired gamers which is still rare. This study aims to investigate the factors that determine advertising value in Indonesia. Based on survey data of 202 mobile gamers, the research was tested using the AMOS method. This study shows that incentives, entertainment, credibility, and personalization significantly affect the advertising value associated with online game pop-up advertising.
